Experiment 15: Create a Virtual Hard Disk and allocate the storage using VM ware Workstation

Aim

To create a snapshot of a Virtual Machine (VM) using VMware Workstation and restore the previous state of the VM by loading the saved snapshot.

Procedure

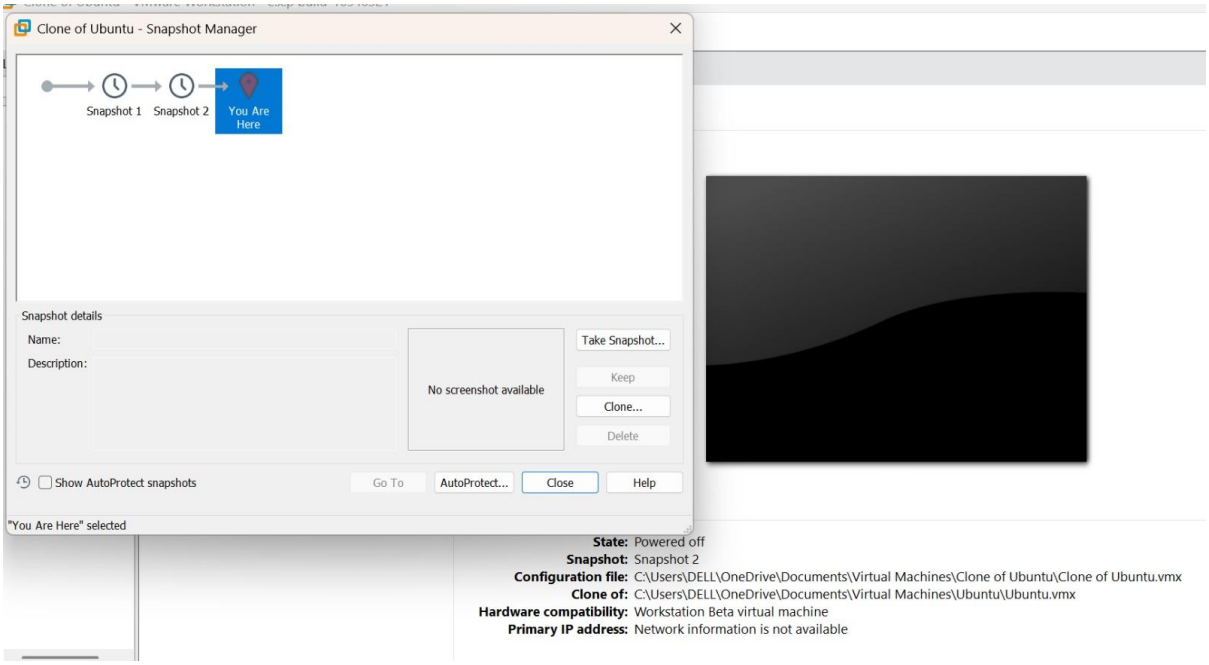

- Open VMware Workstation.
- Select the virtual machine that you want to use.
- Start the virtual machine.
- Make some changes to the guest operating system.
- Shut down or suspend the VM if required.
- Select the VM in VMware Workstation.
- Click VM → Snapshot → Take Snapshot.
- Enter a snapshot name (e.g., Original State).
- Click Take Snapshot.
- Make some changes to the VM.
- Go to VM → Snapshot → Revert to Snapshot.
- Select the previously saved snapshot.
- Click Revert to restore the previous state.

Input

Parameter	Value
Software	VMware Workstation
Virtual Machine	Ubuntu VM
Snapshot Name	Original State
Snapshot Type	VM Snapshot

Guest OS	Ubuntu Linux
Operation	Take Snapshot and Revert

Output

Result

Thus, a snapshot of the Virtual Machine was successfully created using VMware Workstation, and the previous state was restored and tested successfully.
