Experiment 13: Create a Virtual Machine with 1 CPU, 2GB RAM and 15GB storage disk using a Type 2 Virtualization Software.

Aim

To create and configure a Virtual Machine (VM) with 1 CPU, 2 GB RAM, and 15 GB storage using Type-2 virtualization software such as Oracle VM VirtualBox.

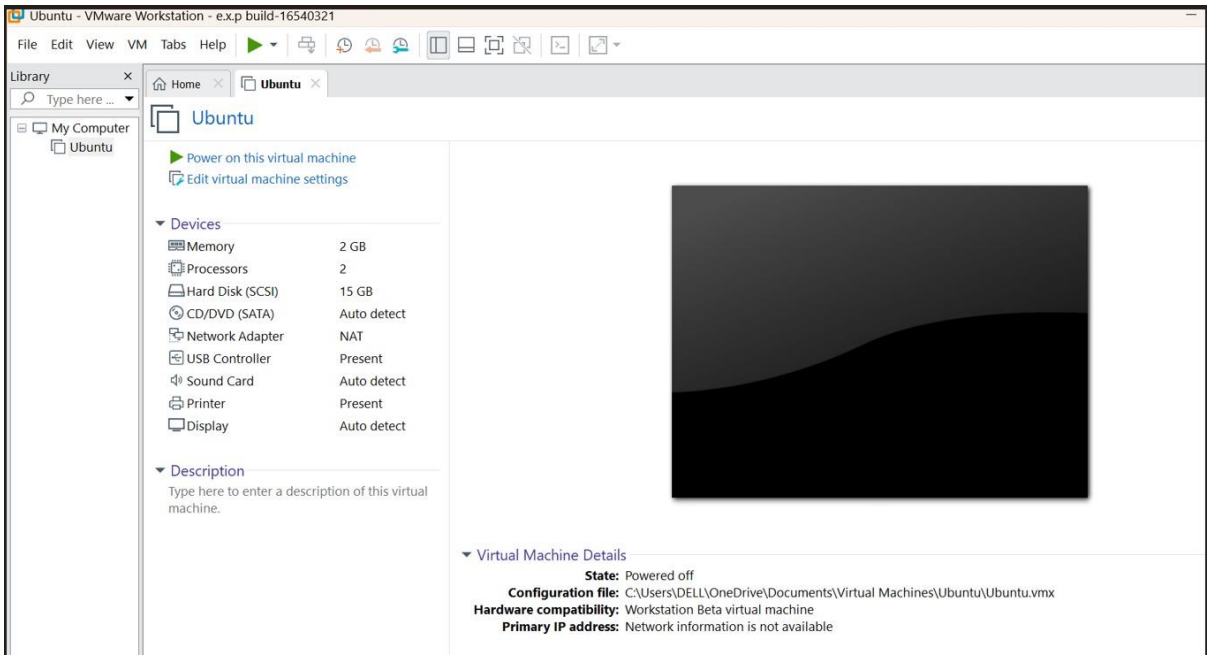

Procedure

- Download and install Oracle VM VirtualBox on the host operating system.
- Open Oracle VM VirtualBox.
- Click on New to create a virtual machine.
- Enter the virtual machine name (e.g., Ubuntu VM).
- Select the operating system type as Linux and version as Ubuntu (64-bit).
- Allocate 1 CPU to the virtual machine.
- Allocate 2048 MB (2 GB) RAM.
- Create a new virtual hard disk.
- Select VDI (VirtualBox Disk Image) format.
- Choose Dynamically Allocated storage.
- Set the virtual disk size to 15 GB.
- Click Finish to create the virtual machine.
- Select the created VM and click Start.

Input

- Type-2 Hypervisor: Oracle VM VirtualBox
- Host OS: Windows 11
- Guest OS: Ubuntu Linux
- Processor: 1 CPU
- RAM: 2 GB (2048 MB)
- Storage: 15 GB
- Disk Format: VDI
- Storage Allocation: Dynamically Allocated

Output

Result

Thus, a Virtual Machine was successfully created and configured using Type-2 virtualization software with 1 CPU, 2 GB RAM, and 15 GB storage.
