Experiment 2: Property Buying and Rental Process Using Cloud Computing (SaaS)

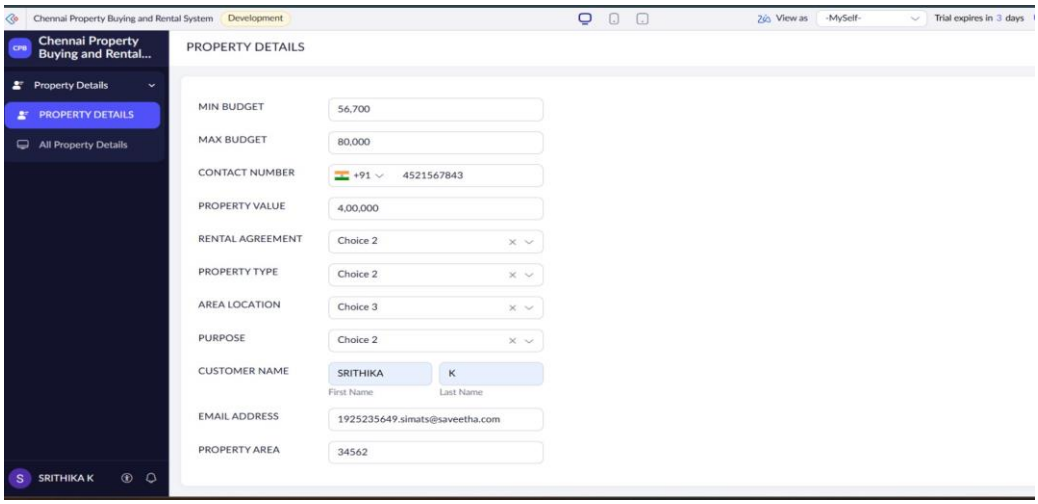

Aim

To create a simple cloud-based software application for property buying and rental services in Chennai using a Cloud Service Provider to demonstrate Software as a Service (SaaS).

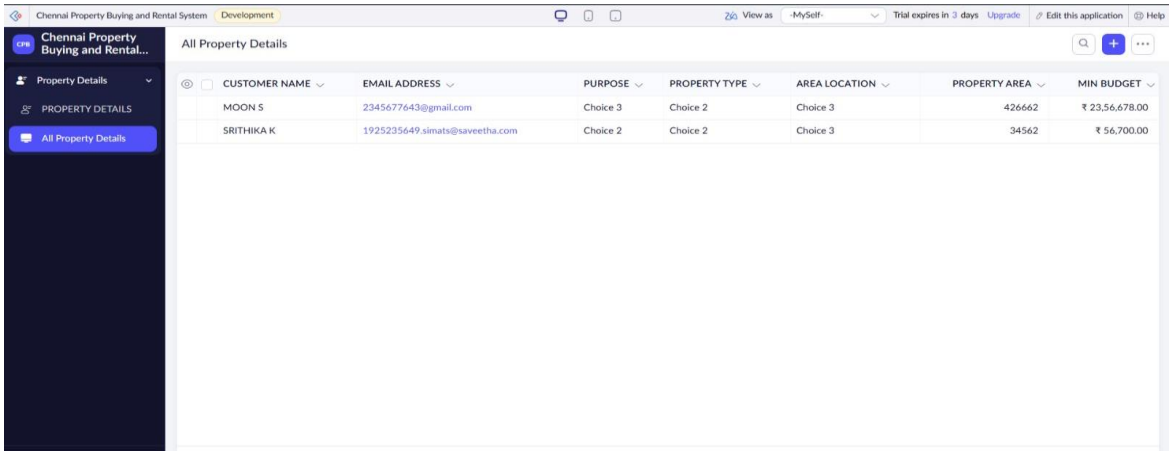

Procedure

1. Open a cloud application development platform such as Google AppSheet.
2. Create a new application for property buying and rental services.
3. Create a form to enter property details.
4. Add fields such as Buy, Rent, Commercial, Residential, Area, Location, Price Range, Property Value, and Rental Agreement.
5. Add the required details for properties available in Chennai.
6. Configure the application to store and display property information.
7. Save and test the application by entering sample property details.
8. Access the application through the internet to demonstrate SaaS.

Input

Output

Result

Thus, a simple cloud-based Property Buying and Rental application was designed to demonstrate Software as a Service (SaaS).
