Experiment 10: Student Information System Using Cloud Computing (SaaS)

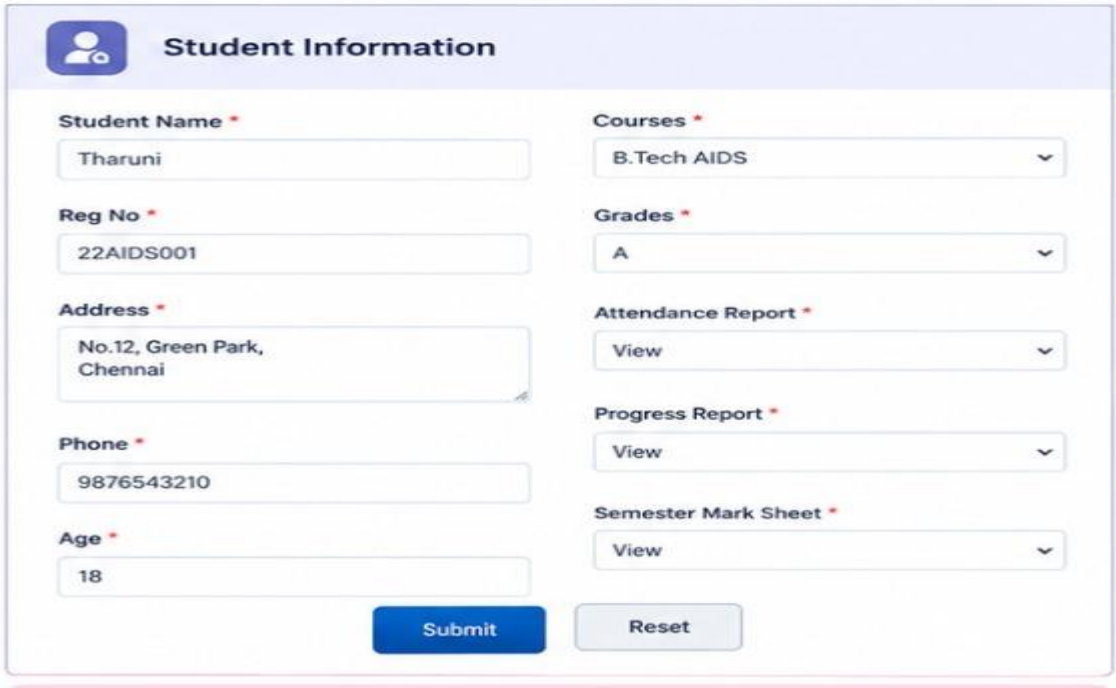

Aim

To create a simple cloud-based Student Information System using Zoho Creator to store and display student details, attendance reports, progress reports, and semester mark sheets, demonstrating Software as a Service (SaaS).

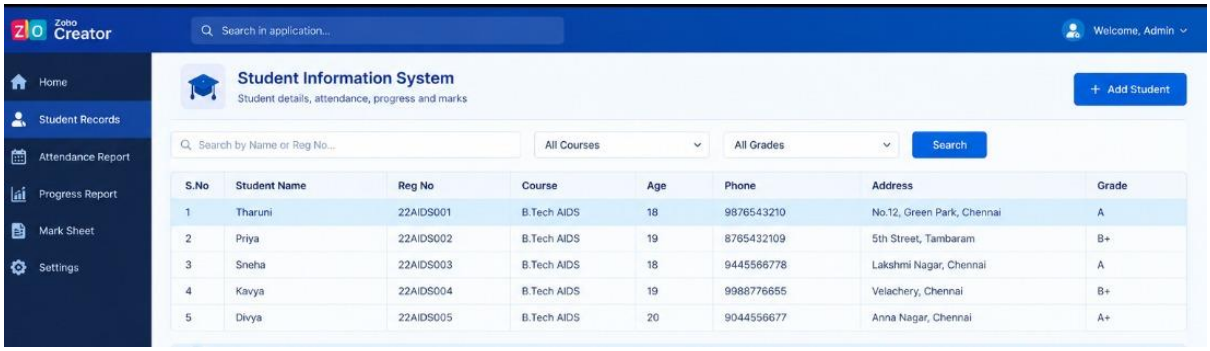

Procedure

- Open Zoho Creator and create a new application named Student Information System.
- Create a Student Information form with student name, registration number, address, phone number, age, course, and grades.
- Create an Attendance Report form to record attendance details.
- Create a Progress Report form to store subject-wise internal marks, assignment marks, and progress.
- Create a Semester Mark Sheet form to record subject-wise marks, grades, total marks, percentage, and results.
- Save the forms and enter sample student information.

Input

Output

Result

Thus, a cloud-based Student Information System was designed using Zoho Creator to manage student records, attendance, academic progress, and semester results, demonstrating the SaaS model.
